

Appropriations Subcommittee

Transportation and HUD

Requesting Organization

City of Roseville

Roseville, MN 55113

Purpose of Request

Funding for this project will support the construction of roads, sidewalks and related infrastructure for a mixed-use redevelopment of a former industrial and commercial site. The Twin Lakes area in Roseville, MN is located at a major interchange of Interstate 35W and has excellent access to the regional marketplace. However, for generations the site was used for industrial and large scale commercial purposes and now is largely unutilized. The City of Roseville has a comprehensive economic redevelopment plan for the site that will integrate business, residential and public spaces. The city is using a "complete streets" approach to the redevelopment to promote safe walking and bicycling to reduce automobile dependence. In addition, the plan makes use of lower-maintenance native vegetation and natural landscaping to reduce stormwater infrastructure and management costs. The City of Roseville has already secured funding to complete the first phase of the infrastructure improvements in 2009. Federal support in fiscal year 2010 would fund the remaining work with right-of-way acquisition, earthwork, sidewalks, and road construction.

Amount Requested

\$4,450,000
